

Data description

City analyzed: Bogotá

Bogotá is divided in 20 districts and 112 subdivisions that are given an UPZ number associated to one district. There are two main webpages from which this information can be acquired:

1. https://es.wikipedia.org/wiki/Unidades_de_Planeamiento_Zonal
2. <https://mapas.bogota.gov.co/>

Once the longitude and latitude information is obtained, Foursquare can be used to explore the venues and cluster the districts according to the main venues. To do this, the Foursquare API that will be primordially used is:

<https://api.foursquare.com/v2/venues/explore?>
